

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method of etching an uniform silicon layer, comprising:
 providing a patterned silicon layer with etching residues on sidewalls thereof;
 treating said patterned silicon layer with etching residues on sidewalls thereof using a gas comprising oxygen and a silicon etching agent to thereby form an etching buffer layer conformally on the etching residues and the top surface of the patterned silicon layer; and
 etching the etching buffer layer, the etching residues, and the patterned silicon layer until the thickness of the patterned silicon layer is reduced.
2. (Original) The method as claimed in claim 1, wherein the etching buffer layer comprises silicon oxide (SiO₂).
3. (Original) The method as claimed in claim 2, wherein the etching buffer layer is formed by oxidation.
4. (Original) The method as claimed in claim 1, further comprising Cl₂, SF₆, or HBr used during etching.
5. (Original) The method as claimed in claim 1, wherein the thickness of the etching buffer layer is about 5~20nm.
6. (Original) The method as claimed in claim 1, wherein the thickness of the patterned silicon layer is about 120~250nm.
7. (Currently Amended) A method of etching an uniform silicon layer, comprising:

providing a silicon layer;
forming a mask with patterns on the silicon layer;
performing a first etching to pattern the silicon layer using the mask as a shield,
to form a patterned silicon layer with patterns and etching residues on sidewalls
thereof;
removing the mask;
treating said patterned silicon layer with patterns and etching residues on
sidewalls thereof using a gas comprising oxygen and a silicon etching agent to thereby
form an etching buffer layer conformally on the etching residues and the top surface of
the patterned silicon layer; and
performing a second etching to remove the etching buffer layer and the etching
residues, to reduce the thickness of the patterned silicon layer.

8. (Original) The method as claimed in claim 7, wherein the mask is a photoresist layer.
9. (Original) The method as claimed in claim 7, wherein the etching buffer layer comprises silicon oxide (SiO_2).
10. (Original) The method as claimed in claim 9, wherein the etching buffer layer is formed by oxidation.
11. (Previously presented) The method as claimed in claim 7, further comprising Cl_2 , SF_6 , or HBr used during the second etching.
12. (Previously presented) The method as claimed in claim 7, wherein the thickness of the etching buffer layer is about 5~20nm.
13. (Original) The method as claimed in claim 7, wherein the thickness of the patterned silicon layer is about 120~250nm.

14. (Currently Amended) A method of etching a silicon layer to avoid non-uniformity, comprising:

- providing a silicon layer;
- forming a mask with patterns on the silicon layer;
- performing a first etching to pattern the silicon layer using the mask as a shield, to form a patterned silicon layer with patterns and etching residues on sidewalls thereof;
- removing the mask;
- introducing a gas containing oxygen treatment, using a gas comprising oxygen and a silicon etching agent, to conformally form an etching buffer layer on the etching residues and the top surface of the patterned silicon layer; and
- performing a second etching to remove the etching buffer layer and the etching residues formed on sidewalls thereof, to reduce the thickness of the patterned silicon layer.

15. (Original) The method as claimed in claim 14, wherein the mask is a photoresist layer.

16. (Previously presented) The method as claimed in claim 14, further comprising Cl_2 , SF_6 , or HBr used during the second etching.

17. (Original) The method as claimed in claim 14, wherein the thickness of the etching buffer layer is about 5~20nm.

18. (Original) The method as claimed in claim 14, wherein the thickness of the patterned silicon layer is about 120~250nm.

19. (Previously presented) The method as claimed in claim 14, wherein the gas comprises 90%~100% oxygen and not more than 10% etching agent used in second etching.

20. (Original) The method as claimed in claim 14, wherein the gas containing oxygen treatment is performed at about 10~90°C.
21. (new) The method of claim 1, wherein said silicon etching agent comprises no water.
22. (new) The method of claim 1, wherein said silicon etching agent comprises Cl_2 , SF_6 , or HBr .
23. (new) The method of claim 7, wherein said silicon etching agent comprises no water.
24. (new) The method of claim 14, wherein said silicon etching agent comprises no water.
